RESEARCH INTERESTS	Biostatistics, public health informatics, network science, and microbiome. My research focuses now on developing and applying statistical methods for the analysis of network data as well as microbiome data. Specific topics include: social contact networks, infectious diseases on networks, dynamic networks, citation networks, microbiome of the airplane cabin, microbiome of the built environment. In addition I have decades of experience in collaborative research, particularly in the application of biostatistics in epidemiological and clinical sciences.

PUBLICATIONS **Published/In Press**

As of June 27, 2020, my **h-index** is either **50** (per Google Scholar) or **39** (per Web of Science), and my **Erdős number** is **4**.

*Interpretation:*The following designations are used: @ for doctoral or master's student whose research was performed under my supervision, # for master's or doctoral students who worked on the publication, % for residents or clinical fellows who worked on the publication. According to criteria of the Department of Biostatistics and Bioinformatics, a publication on which I am second author and for which a student working under my supervision is first author is equivalent to a first author paper for me. In addition, I have worked with two students from the Computer Science program (Liu and Thayer). In the computer science world, conference papers such as those listed here also count as peer-reviewed publications. In the case of these two students I was co-advisor with Professor Xiong from CS, I consider myself senior author on those publications.

All publications are peer-reviewed, except when noted otherwise.
